AFRL awards \$24.6M contract to Rome Research Corp.

by Fran Crumb, Information Directorate

ROME, N.Y. — The Air Force Research Laboratory's Information Directorate has awarded a \$24.6 million contract to Rome Research Corp., a subsidiary of PAR Technology Corp. of New Hartford.

The four-year agreement is an indefinite-delivery and indefinite-quantity contract that allows the Air Force to acquire research and development, testing and evaluation support up to the maximum dollar amount. Rome Research Corporation will provide that support in multiple technical areas such as advanced antenna design, integration and evaluation on airframes; command and control technologies and systems applications; communications signal processing; advanced communications environment; communications network design and administra-

tion; measurement methodology; software development; and information systems integration and evaluation.

"The work under this contract will be performed at the AFRL Rome Research Site, as well as the directorate's remote facilities at Newport in Herkimer County and at Stockbridge in Madison County," said Vincent S. Janik, program manager in the directorate's Information Systems Division.

"Rome Research scientists and engineers will also provide support at other locations, such as military exercises," Janik said. "The overall focus of the agreement is to provide support to the directorate's Information Systems and Information Grid Divisions. Douglas J. Rosenthal of the directorate's Contracting Division negotiated the Rome Research agreement. @
